

# CS3 Rubric – Charlottesville Crime & Temperature Case Study

DS 4002 – Instructor: Dean Paler

Due: December 9

**Submission format: GitHub repository link uploaded to Canvas**

## Individual Assignment

**Why am I doing this?** Local community leaders often speculate about the relationship between public safety and weather. This case study provides you the chance to utilize your technical and analytical skills to investigate whether hotter days are associated with higher crime counts in the Charlottesville area. By applying correlation analysis and visualization, you will help answer a pressing local question: does temperature correlate with crime?

**What am I going to do?** In this case study, you will uncover whether hotter days are correlated to higher counts in Charlottesville. Using the case study repository and template script, you will begin by cleaning and familiarizing yourself with two datasets: five years of daily crime report and daily weather data from the Meteostat Python library. From there, you will aggregate crime counts by date, merge them with temperature records, and finally calculate the Pearson correlation coefficients to test the strength of heat and crime's relationship. Along the way, you will produce visuals that tell the story of your findings.

Deliverables include:

- A final GitHub repository and slidedeck that communicates your analysis to both city leaders and fellow students

## Tips for success:

- Follow your curiosity! Explore the questions that arise as you examine sources and data.
- Try new approaches! The template script is only a guide; feel free to experiment with different analyses or visualizations.
- Be transparent! Clearly document your assumptions, limitations, and any potential biases.

**How will I know I have succeeded?** You will meet expectations on this case study when you follow the criteria in the rubric below.

| Spec Category | Spec Details                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
